

**ENERGY EFFICIENT, HAIL PROTECTION AND
UP TO 60% LESS HEAT
THAN OTHER SKYLIGHTS THE SAME SIZE**

Square and Rectangular Skylights

MULTIPLE GLAZED FOR HEAT & HAIL PROTECTION

Mutiple glazing our skylights gives you more barriers between you and the sun, this in turn reduces the heat transfer through the skylight.

This also gives you the benefit of 3 barriers to be broken in severe storm events. We are still yet to have water through one of our skylights following one of these events.

Common Sizes

- 400 x 400
- 400 x 600
- 400 x 800
- 400 x 1200
- 400 x 1500
- 500 x 500
- 500 x 700
- 500 x 1000
- 500 x 1200
- 500 x 1500
- 600 x 600
- 600 x 800
- 600 x 900
- 600 x 1000
- 600 x 1200
- 550 x 550
- 700 x 700
- 800 x 800
- 900 x 900
- 1000 x 1000

High Reflective Silver Shafts - not flexi shaft

Flexi shafts are designed for air ducting, not skylights. The ribs in the shaft tend to reflect the light up instead of down. The Australain Standards for skylights originally stated - *'should not be used'* for this reason.

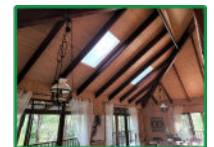

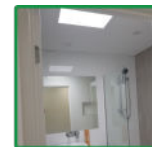

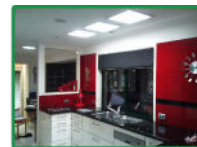

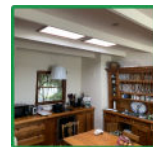

They are also used to get around roof obstructions, whilst it sounds good in theory, its like trying to shine a torch around a corner.

A smooth flat finish gives best even light transfer, although it takes longer to instal, the end result is better.

Materials

- **Glazing -**
 - 3mm High Impact Acrylic dome - clear or opal
 - 10mm Polycarbonate twin-wall panel
- **Flashing -**
 - 0.55 Bluescope Zinalume
 - Optional - Galvanised and 316 Stainless
- **Shaft -**
 - Highly reflective reinforced heavy duty self supporting sisalation - not flexi shaft
 - Provides a barrier against moisture, vapours, wind and heat from ceiling cavity
- **Ceiling Frame -**
 - 40x40x1.6 Aluminium - Powder Coated White or Clear Annodised
 - optional - Timber frame to suit, mitred corners
- **Diffusers -**
 - Prismatic, 422 Opal or Seadrift.

**MANUFACTURED IN OUR OWN FACTORY, TO OUR STANDARDS
10 YEAR GURANTEE INCLUDING LABOUR ON OUR SKYLIGHTS**
